

IMDb Testing Project Using Playwright

Prepared By: Rohan Tosh

Project Overview

This project focuses on automated testing of the IMDb platform using Playwright. The testing process validates important modules and ensures the application works correctly across multiple scenarios. The automation framework improves testing efficiency, reliability, and application quality.

Project Planner

- 1. Requirement Analysis
- 2. Test Case Design
- 3. Playwright Framework Setup
- 4. Test Script Development
- 5. Test Execution
- 6. Bug Reporting & Validation
- 7. Result Documentation

Project Requirements

- Node.js Installed
- Playwright Framework
- VS Code / IDE
- Internet Connection
- IMDb Test Environment
- Browser Support (Chrome, Edge, Firefox)
- Test Data for Validation

Services Covered in Testing

Service No.	Service Name
1	Login Service
2	Search Service
3	Movie Details Service
4	Watchlist Service
5	Ratings & Reviews Service
6	Trending & Recommendations Service
7	User Profile Service
8	Navigation & Menu Service

Conclusion

The IMDb Testing Project using Playwright successfully demonstrates automated testing for multiple services of the

IMDb platform. The project improves testing speed, reduces manual effort, and ensures application stability and functionality through automation.
